

Breaking Language Barriers for Equitable Government Services

The **Gov Studio™ Enterprise Translation Hub (ETH)** (built on SnapApp) is a secure, cloud-native AI translation platform designed for public sector agencies to deliver high-quality, multilingual communication at scale using advanced AI document translation. By combining Google's advanced AI with government-specific workflows, ETH ensures that every resident, regardless of the language they speak, has equal access to vital services.

Why ETH Matters for the US Public Sector

In the public sector, language access is a legal mandate under **Title VI of the Civil Rights Act**. ETH helps agencies move beyond slow, manual processes to a centralized, "AI + Human" model that reduces risk and builds community trust.

- **Ensure Equitable Access:** Support individuals with Limited English Proficiency (LEP) in **135+ languages**.
- **Maintain Compliance:** Meet federal and state mandates for document accessibility and translation accuracy.
- **Rapid Crisis Response:** Instantly translate government documents, including emergency alerts, health guidance, public safety notices and other critical technical document translations.
- **Protect Taxpayer Dollars:** Reduce reliance on expensive manual-translation vendors with predictable, per-page pricing.

Key Features & Capabilities

Feature	Impact on Your Agency
Precision AI Translation	Uses Google's Neural Machine Translation (NMT) and LLMs for high-fidelity results.

Glossary Enforcement	Build custom libraries of legal, medical, or technical terms to ensure consistency.
Native Format Support	Drag-and-drop Google Workspace, MS Office, and Adobe PDFs while retaining all formatting .
Human-in-the-Loop	Side-by-side review interface for internal staff to verify and approve critical content.
Secure by Design	SSO/SAML integration, role-based access, and full audit logs for every document.
Metadata Retention	Automatically reinserts accessibility tags, ensuring translated PDFs remain 508-compliant.

Designed for Every Stakeholder

- **For Program Directors:** Gain a scalable, auditable solution that fixes translation budgets and proves compliance during audits.
 - **For Operations Managers:** Automate high-volume document batches (100+ pages) and eliminate manual workflow bottlenecks.
 - **For Frontline Staff:** An intuitive, "one-click" interface that requires zero technical training to serve non-English speaking constituents.
-

Ready to Modernize Your Agency's Language Access?

Don't let language barriers hinder your mission or compromise your compliance. Join the growing number of public sector organizations using **ETH** to deliver faster, more accurate, and more secure translations for the residents they serve.

Frequently Asked Questions

Q: How does ETH ensure our agency remains compliant with Title VI and ADA requirements?

A: ETH specifically addresses federal mandates by providing high-quality translations in 135+ languages, ensuring "meaningful access" for Limited English Proficiency (LEP) populations. Crucially, the AI translation system preserves document metadata and accessibility tags (such as those in tagged PDFs), ensuring that translated outputs remain **Section 508 compliant** and screen-reader friendly.

Q: Can we maintain consistent terminology for highly specialized legal or medical documents?

A: Yes. Unlike generic AI document translation tools, Gov Studio™ ETH features **Glossary Enforcement**. Your agency can upload approved terminology databases for specific domains (e.g., public health, judicial, or social services). The AI is then forced to use these specific terms, eliminating the risk of "hallucinated" or culturally insensitive translations in high-stakes documents.

Q: Is our sensitive citizen data used to train public AI models?

A: No. Security is a cornerstone of the SnapApp™ architecture. When deployed within your agency's **Google Cloud Platform (GCP)** environment, your data remains yours. Gov Studio™ ETH uses "zero-retention" APIs, meaning your documents are encrypted in transit and at rest, and are **never** used by Google or third parties to train global machine learning models.

Q: We often have 100+ page handbooks. Can the system handle large-scale batch processing?

A: Absolutely. Gov Studio™ ETH is built for "Enterprise Scale." As an AI translation platform for documents of any size, it supports **Batch Translation**, allowing users to upload entire folders of documents simultaneously. It natively handles large files (exceeding 100 pages) without timing out, and it maintains the original layout, images, tables, and fonts stay exactly where they belong in the translated version.

Q: Does the platform allow for human oversight before a document is published?

A: Yes. We utilize a **Human-in-the-Loop (HITL)** workflow. While the AI performs the heavy lifting in seconds, the platform provides a side-by-side editor for your internal bilingual staff or

professional editors to review, refine, and "sign off" on translations. This ensures the final output meets your agency's highest standards for public-facing communication.
